## Grand Opening Spring 2010

**We specialize in herbaceous perennials, grasses, ferns, groundcovers, and shrubs. We carry a selection of plants native to New York State and the Adirondack Park. Our plant selection includes species that work well for rain gardens and river, stream, and lakeshore buffers to help protect water quality. And of course our plants can also be used for regular landscaping purposes as well!**

Planting native plants helps protect New York's biodiversity by providing food and habitat for birds, butterflies, and other wildlife, as well as assuring that you are not planting an invasive plant! Natives have evolved in our environment over many years, so they are already adapted to survive here and therefore require less fertilizing, pesticides, and watering - which saves you time and money, all while also protecting the environment. And our native plants come in just about every size, shape, and color - so you can be sure to find something that you will like!

**Have a specific landscaping project coming up that will need a large number of plants?** Contact us about placing an advance order so we can be sure to have what you are looking for available.

**Don't see what you are looking for on our list?** Let us know... We can grow special orders with enough lead time, and we can also get additional species in.

**Want to help make native plants more available in your area?** Give us a call.... We can come to your community with a supply of our plants to offer a native plant sale event.

We are located in Hartford, NY, about 30 min. east of Glens Falls. Contact us at 518-632-5505 or [chris@fiddleheadcreek.com](mailto:chris@fiddleheadcreek.com) for current information about plant availability and pricing, placing an order, or visiting the nursery, or go online to [www.fiddleheadcreek.com](http://www.fiddleheadcreek.com).
