

Viele Pond

Survey Date: August 9, 2021

Last Surveyed: August 7, 2018

Survey Team: L. Johnson, T. Firkins

Lake Description

Viele Pond is 27-acres and it has 1-mile of shoreline. It is located in Warrensburg, Warren County and lies in the Lake Champlain watershed. The team launched at one of three hand launches along Viele Pond Road. The eastern portion of the lake is very shallow and could not be accessed by boat.

Invasive Species Presence

No invasive plants were detected.

Native Biota

Comprehensive surveys of all native plants found within the lake were not prioritized in 2021. Native plants found within this pond include *Nuphar adventa* (spatterdock), *Nymphaea odorata* (white water lily), *Utricularia vulgaris* (common bladderwort), *Potamogeton gramineus* (variable pondweed), *Dulichium arundinaceum* (three way sedge), *Nymphoides cordata* (little floating heart), *Ceratophyllum demersum* (coontail), *Potamogeton robbinsii* (robbins pond weed)

Animal Aquatic Invasive Species

Sieves were also taken to determine the presence of *Corbicula fluminea* (Asian clams). None were found. Plankton tows were not done as the pond was entirely littoral zone.
